National Institute of Food Technology Entrepreneurship and Management (NIFTEM), Kundli, Haryana had recently participated in “Multicountry Observational Study Mission on Food Safety Management Systems along Food Value Chains,” held at Tokyo, Japan recently.

As per a press release, the observational study mission was organised by the Asian Productivity Organization, Tokyo, Japan. Out of total 18 participants from various Asian countries, Dr Anurag Singh, assistant professor, Food Science & Technology department, NIFTEM represented India in this study mission.

The study mission was to observe the food safety management systems followed in various food industries across Japan and various research activities being conducted by different research institutions like National Institute of Food Research and Kyoto University, Japan.

The event had participants from various food processing industries, farms and research institutions. They deliberated on key issues on development of diverse management systems to control food safety and quality along value chains and proposed the pathway for implementing the same in their respective countries.

Dr Singh shared NIFTEM’s contribution in food processing sector, entrepreneurship, NIFTEM's “Make in India” initiative and village adoption programme for composite development of rural Indian economy. These initiatives by NIFTEM were highly applauded by all the participants from nations like; Bangladesh, Cambodia, Republic of China, Republic of Korea, India, Indonesia, Iran, Laos, Malaysia, Nepal, Pakistan, Philippines, Sri Lanka, Thailand, and Vietnam.
